

Spec Editing Woes

Andreas Rossberg

Dfinity

Proposal Interferences

Proposal **depends** on another
... simple case

Proposal **joins** with another
... no clear owner

Proposal **cross-cuts** with another

Problems

Repos have started cherry-picking from others

Merging upstream changes becomes a mess

No natural owners for consolidation

No natural owners for cross-products

No tests for cross-products

Suggestions

Only rebase on other repos **in full**

Linearise proposals at phase 3
(before substantial spec work)
